Die Zeiten von HTML-first sind vorbei

Distribution of JavaScript kilobytes per page

Web Almanac 2022: JavaScript

NEXT.js

Remix

Das haben jetzt alle:

- Code splitting
- Lazy loading
- Tree shaking
- Prefetching

The big differentiator:

Rendering Strategien

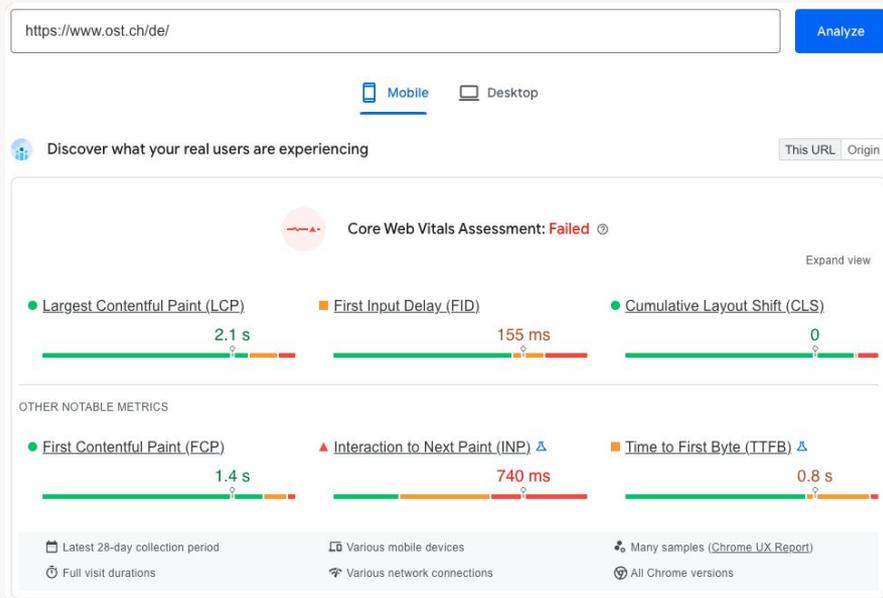

Die Stärken des Webs:

Zugänglichkeit & Distribution

Web Vitals

<https://pagespeed.web.dev/>

Impact der Strategien

Client Side Rendering

CSR

Leeres HTML Template vom Server. Seite wird im Client erstellt.

 SEO

 TTFB, FID

 FCP, CLS

Server Side Rendering

SSR

Komplettes HTML vom Server. Neu generiert bei jeder Abfrage.

 FCP, CLS

 TTFB, FID

Static Site Generation

SSG

Komplettes HTML vom Server. Erstellt beim Build.

 TTFB, FCP, CLS

 (FID)

Incremental Static Regeneration

ISR

Komplettes HTML vom Server. Erstellt beim Build und einigen Abfragen.

 TTFB, FCP, CLS

 (FID)

Frameworks

Framework	CSR	SSR	SSG	ISR
Next.js	✓	✓	✓	✓
Nuxt.js	✓	✓	✓	✓
Angular.js	✓	✓	✗	✗

Hydration

Server Render

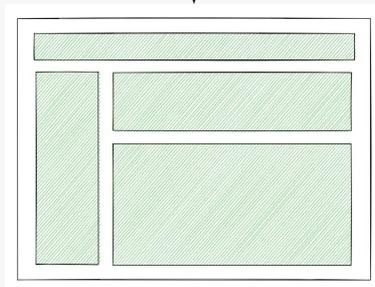

HTML, CSS

Client Render

HTML, CSS, Event
Listeners, App State, etc.

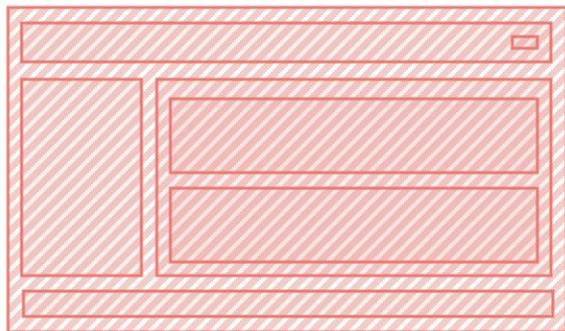

Doppelte Arbeit
für die *gesamte* App

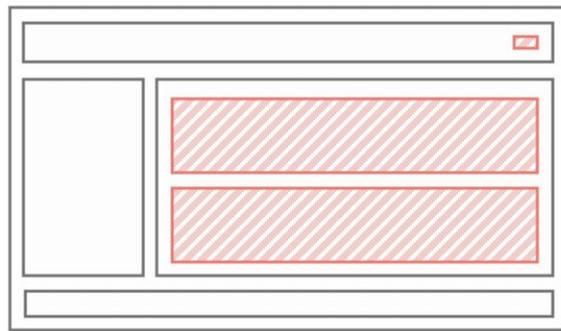

Hydration 2.0

Full Page Hydration

Component-Level Hydration

Examples: Astro, Qwik, React Server Components

Astro Islands

Astro Islands

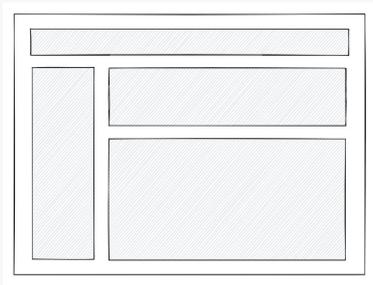

```
import MyReactComponent from '../components/MyReactComponent.jsx';
import MyVueComponent from '../components/MyVueComponent.vue';

// No Hydration, no JavaScript sent to client
<MyReactComponent />

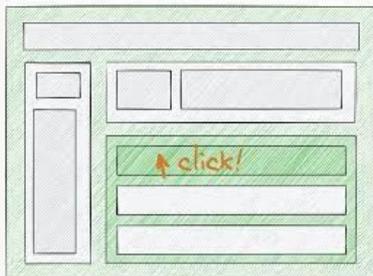

// This component gets hydrated
<MyVueComponent client:load />
```

Qwik Resumability

Server Render

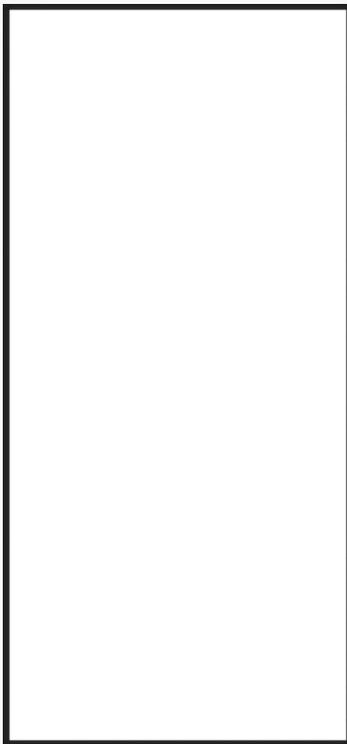

HTML, CSS, Serialized
Event Listeners, App
State, etc.

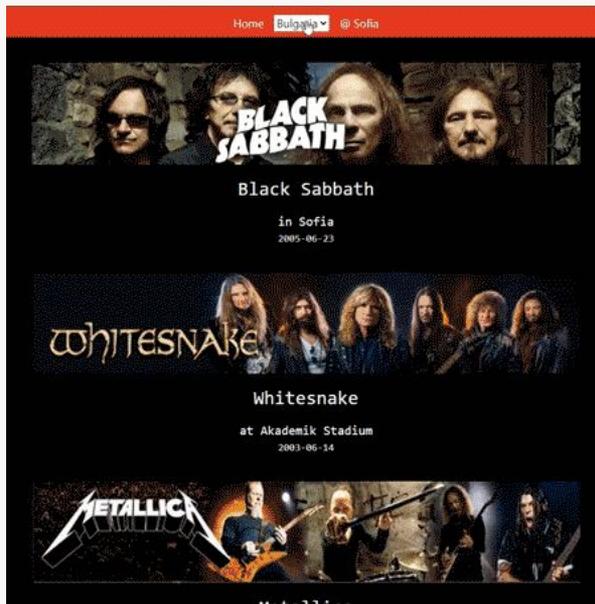

Qwik Resumability

```
<html>
  <body>
    <button on:click="./someJsFile#click">Click Button</button>
  </body>
  <script src="/qwikloader.js" events="click"></script>
</html>
```

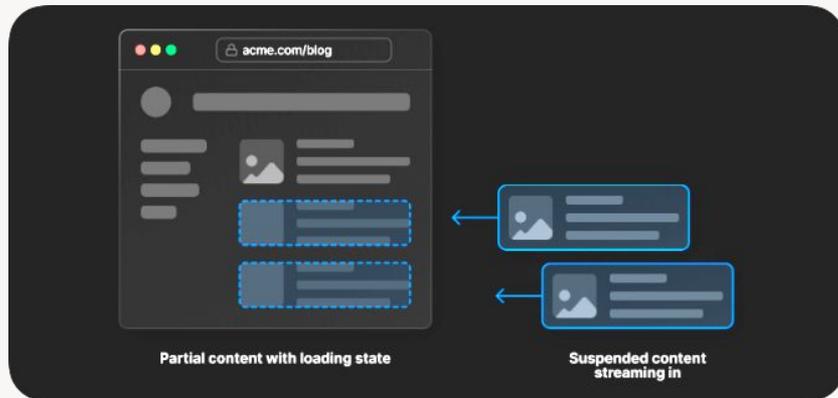

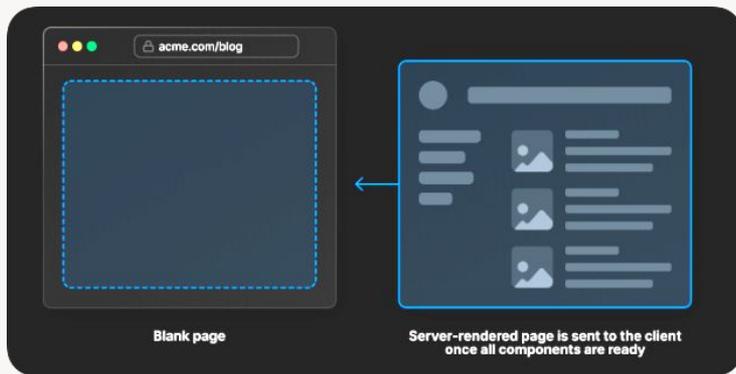

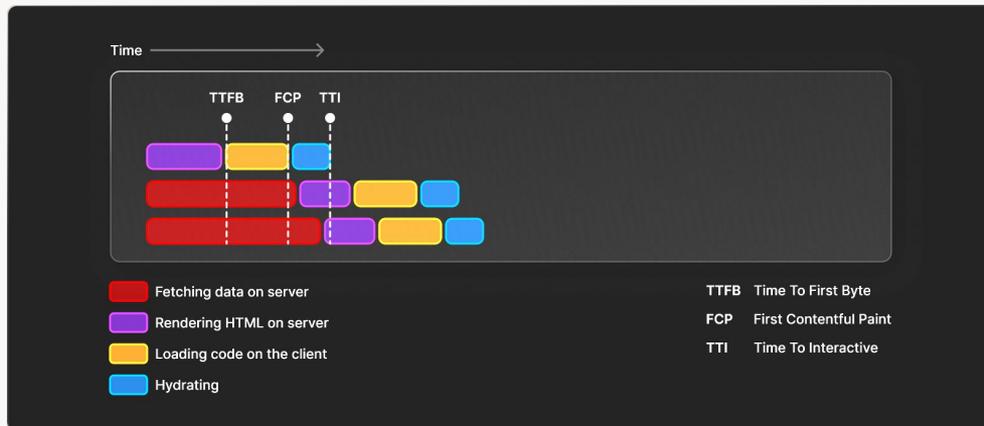

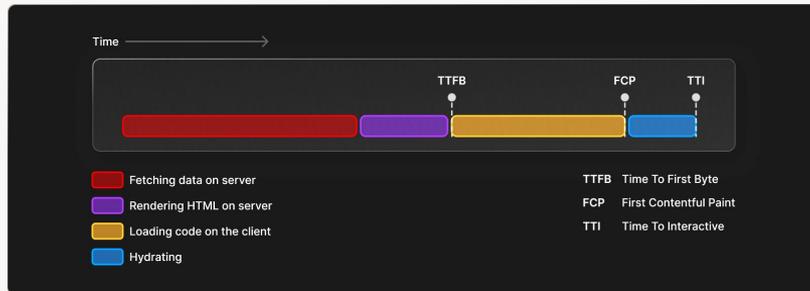

Streamed SSR

Streamed SSR

Streamed SSR

Next.js 13 - Streamed SSR

```
import { Suspense } from "react";
import { Header, Artist } from "../Components";

export const Page = () => (
  <section>
    <Header />
    <Suspense fallback={<p>Loading...</p>}>
      <Artist />
    </Suspense>
  </section>
);
```

Next.js 13 - Server Components

```
import { db } from "@utils/database";

export const ServerPost = () => {
  const post = await db.query("SELECT * FROM Posts...");

  return (
    <div>
      {post.content}
      <ClientReply />
    </div>
  );
}
```

```
'use client';

import { useState } from 'react';

export const ClientReply = () => {
  const [reply, setReply] = useState('');

  return (
    <textarea onChange={setReply}>
      {reply}
    </textarea>
  );
}
```

2023 - Rendering Strategien auf *Component Level*

Streamed SSR & Partial Hydration

Client Side Rendering

CSR

 SEO

 TTFB, FID

 FCP, CLS

Server Side & Static Rendering

SSR, SSG, ISR

 FCP, CLS, TTFB, FID

Ein wenig komplizierter als früher..

...aber auch für jeden Use Case
die beste *User Experience*

Dankä fürs Zuälose!
